

SERVICE MANUAL

1950 MULTISCAN Color Monitor

JUNE, 1990

PN-314036-01

PRECAUTIONS AND NOTICES**1 SAFETY PRECAUTIONS**

1. Observe all caution and safety related notes located inside the display cabinet.
2. Operation of these displays outside the cabinet or with the cover removed, involves a shock hazard from the display power supplies. Work on the display should not be attempted by anyone who is not thoroughly familiar with precautions necessary when working on high voltage equipment.
3. Do not install, remove or handle the picture tube in any manner unless shatter-proof goggles are worn. People not so equipped should be kept away while handling picture tube. Keep picture tube away from the body while handling.
4. The picture tube is constructed to limit X-RAY radiation to 0.5 mR/HR. For continued protection, use the recommended replacement tube only, and adjust the voltages so that the designated maximum rating at the anode will not be exceeded.
5. Before returning a serviced display to the customer, a thorough safety test must be performed to verify that the display is safe to operate without danger or shock. Always perform an AC leakage current check on the exposed metallic parts of the cabinet, such as screwheads. Test must be performed to verify that the display is safe to operate without danger or shock. Always perform an AC leakage current check on the exposed metallic parts of the cabinet, such as screwheads. Test method for current leakage described as follows.
 - (a) Plug the AC line cord directly into rated AC outlet (do not use a line isolation transformer during this check).
 - (b) Use an AC voltmeter having 5000 ohms per volt or more sensitivity in the following manner. Connect a 1500 ohms 10 Watt resistor, paralleled by a 0.15mfd, AC type capacitor between a known good earth ground (water pipe, conduit, etc.) and the exposed metallic parts simultaneously. Measure the AC voltage across the combination of 1500 ohms resistor and 0.15mfd capacitor.
 - (c) Reverse the AC plug at the AC outlet and repeat AC voltage measurements for each exposed metallic part.
 - (d) Voltage measured must not exceed 0.5 volts RMS. This corresponds to 0.35 milliamp AC. Any value exceeding this limit constitutes a potential shock hazard and must be corrected immediately.

2 PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety visual inspections and the protection afforded by them cannot necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Before replacing any of these components, read the parts list in this manual carefully. The use of substitute replacement parts which do not have the same safety characteristics as specified in the parts list may create shock, fire, X-RAY radiation or other hazards.

3 SERVICE NOTES

1. When replacing parts or circuit boards, clamp the lead wires around terminals before soldering.
2. When replacing a high wattage resistor (more than 1/2W of metal oxide film resistor) in circuit board, keep the resistor about 10mm (1/2 in) away from circuit board.
3. Keep wires away from high voltage or high temperature components.
4. Keep wires in their original position so as to reduce interference.

4 HIGH VOLTAGE WARNING

Operation of monitor outside of cabinet or with back removed involves a shock hazard. Work on these models should only be performed by those who are thoroughly familiar with precautions necessary when working on high voltage equipment.

Exercise care when servicing this chassis with power applied. Many B plus and high voltage terminals are exposed which, if carelessly contacted, can cause serious shock or result in damage to the chassis. Maintain interconnecting ground lead connections between chassis, picture tube dag when operating chassis.

Certain HV failures can increase X-ray radiation. Monitor should not be operated with HV levels exceeding the specified rating for their chassis type. The maximum operating HV specified for the chassis used in this monitor is

24 KV \pm 1KV

with a line voltage of 120V AC. Higher voltage may also increase possibility of failure in HV supply.

It is important to maintain specified values of all components in the horizontal and high voltage circuits and anywhere else in the monitor that could cause a rise in high voltage or operating supply voltages. No changes should be made to the original design of the monitor. Components shown in the shaded areas on the schematic should be replaced with exact factory replacement parts. The use of unauthorized substitute parts may create a shock, fire or other hazard.

To determine the presence of high voltage, use an accurate, high impedance, HV meter connected between second anode lead and CRT dag grounding device. When servicing the High Voltage System, remove static charge from it by connecting a 10K ohm resistor in series with an insulated wire (such as a test probe) between picture tube dag and 2nd anode lead. (AC line cord disconnected from AC power outlet).

The picture tube used in this monitor employs integral implosion protection. Replace with tube of the same type number for continued safety. Do not lift picture tube by the neck. Handle the picture tube only and after discharging the high voltage completely.

H.V. Protector

The high Voltage protector control 1 (VR2002) and control 2 (VR2003) are permanently sealed at factory.

Do not attempt to readjust.

SPECIFICATIONS

A. Electrical Description

CRT: 14" (13V) 90 Deflection, 29mm neck, 0.31mm Dot pitch, Non-glare screen.

Input signal

Video: TTL Level Positive Analog 0.6Vp-p/75 OHM Positive.

Sync: Separate sync. TTL Level
 Horizontal sync. Positive/Negative
 Vertical sync. Positive/Negative
 Composite sync. TTL Level Positive/Negative
 Composite sync. on Green Video
 (sync 0.3Vp-p Negative, Video 0.6Vp-p Positive)

Display colors

TTL Input: 8/16/64 colors
 Analog Input: Unlimited colors

Synchronization

Horizontal: 15.5KHz to 37KHz
 Vertical: 50 to 80Hz (Non Interlace)

Resolution

Horizontal: 800 dots
 Vertical: 600 lines

Video band width: 30MHz (−3dB)

Misconvergence: Center max 0.3mm
 Corner max 0.5mm

Power supply: AC120VAC or 220VAC (50/60Hz)

Power consumption: 80W

NOTE: The above specifications are subject to change without notice for further improvement

B. Mechanical Description

1. Cabinet:

Molded plastic cabinet with attachable tilt swivel base.
2. Dimension:

Monitor 370 (W) x 360 (H) x 385 (D) mm
Carton 456 (W) x 452 (H) x 464 (D) mm
3. Weight:

13Kg (Net) 15Kg (Gross)
4. Controls

Rear controls: TTL/ANAGLOG switch

Side controls: Brightness control
 Contrast control
 V. Size control
 V. Position control
 V. Hold control
 H. Position control Text Switch
 H. Width Switch

Front controls: Power Switch
 Multidisplay control
 (color switch)

5. Input signal terminal: 9 PIN D-sub connector (male)

PIN ASSIGNMENTS AND SIGNAL LEVELS

GENERAL

CM-314 The Intelligent Monitor is a high resolution color monitor that automatically adjusts to graphics board scanning frequencies from 15.5KHz to 37KHz.

CM-314 gives IBM PC, PC/XT, and PC/AT users crisp text and vivid color graphics displays when used with any of the four IBM graphics adapters (the CGA, EGA, PGA or VGA)

CM-314 can also be used with other IBM compatible graphics adapters to provide IBM users with the widest range of color monitor compatibility and capability available in the market place.

FEATURES

- * CM-314 automatically scans all frequencies between 15.5KHz and 37KHz.
- * CM-314 is compatible with the IBM PC, PC/XT, PC/AT and look alike.
- * CM-314 is compatible with the IBM Professional Graphics Adapter, the IBM Enhanced Graphics Adapter, the IBM Video Graphics Array, the IBM Multi color Graphics Array and other IBM compatible graphics adapters.
- * CM-314 wide compatibility makes it possible to upgrade boards or software without purchasing a new monitor.
- * CM-314 has a maximum horizontal resolution of 800 dots and a maximum vertical resolution of 600 lines for superior clarity of display.
- * CM-314 offers both TTL and ANALOG signal inputs, and in the ANALOG mode can display an unlimited palette of colors depending on the graphics board and software being used.
- * CM-314 features a TEXT SWITCH (TTL mode only) with a choice of four colors (Green, Amber, White with Blue Background and white) displaying word processing, spread sheets, databases or other software in crisp alpha numeric text on a dark-bulb black background.
- * CM-314 has a 14 inch diagonal display and a large, 13 inch viewing area.

1. POWER SWITCH

Used to turn the POWER ON or OFF. When power is ON, the power indicator is lit.

2. COLOR SWITCH

When TEXT switch is OFF. There are three color configuration (8/16/64 colors) necessary when using non-IBM compatible graphics adapters can be set using the switch. Refer to instructions accompanying the graphics adapter being used for information on how many colors the adapter can display.

When TEXT switch is ON, the text of the display will appear in one color (Green, Amber, White with Blue Background and normal white) Selected by this switch.

NOTE: This switch should be set correctly in relation to the input signal of the graphics adapter being used. Refer to instructions accompanying the graphics adapter for information on the input signal and refer to No 4 below.

3. TTL/ANALOG SWITCH

Used to select an input Video Signal-either TTL or Analog-of the graphics adapter.

It is important to determine whether the input signal of the graphics adapter being used is Analog or TTL prior to connecting the adapter with your personal computer.

Refer to instructions accompanying the graphics adapter for information on the input signal.

4. TEXT SWITCH

This switch controls the text mode of CM-314 Refer to No 2 color switch for full information on using the TEXT switch.

NOTE: The text switch and the color switch work only in the TTL mode.

5. H. WIDTH SWITCH

Adjust this switch for the horizontal size of display preferred. When this switch is ON, the width of the display size changes.

NOTE: When the horizontal scanning frequency is over 20KHz H. WIDTH cannot be adjusted.

6. BRIGHT CONTROL

Used to adjust the picture brightness of the screen.

7. CONTRAST CONTROL

Adjust the display to the contrast preferred by the user.

8. V. SIZE CONTROL

Turn this knob for the proper vertical size of the display. Turn the knob clockwise for a larger display; turn it counterclockwise for a smaller display

9. V. POSITION CONTROL

Turn this knob for the proper vertical position of the display. Turn the knob clockwise for a higher display position; Turn it counterclockwise for a lower display position

10. V. HOLD

Adjust the vertical stability of the display.

11. H. POSITION CONTROL

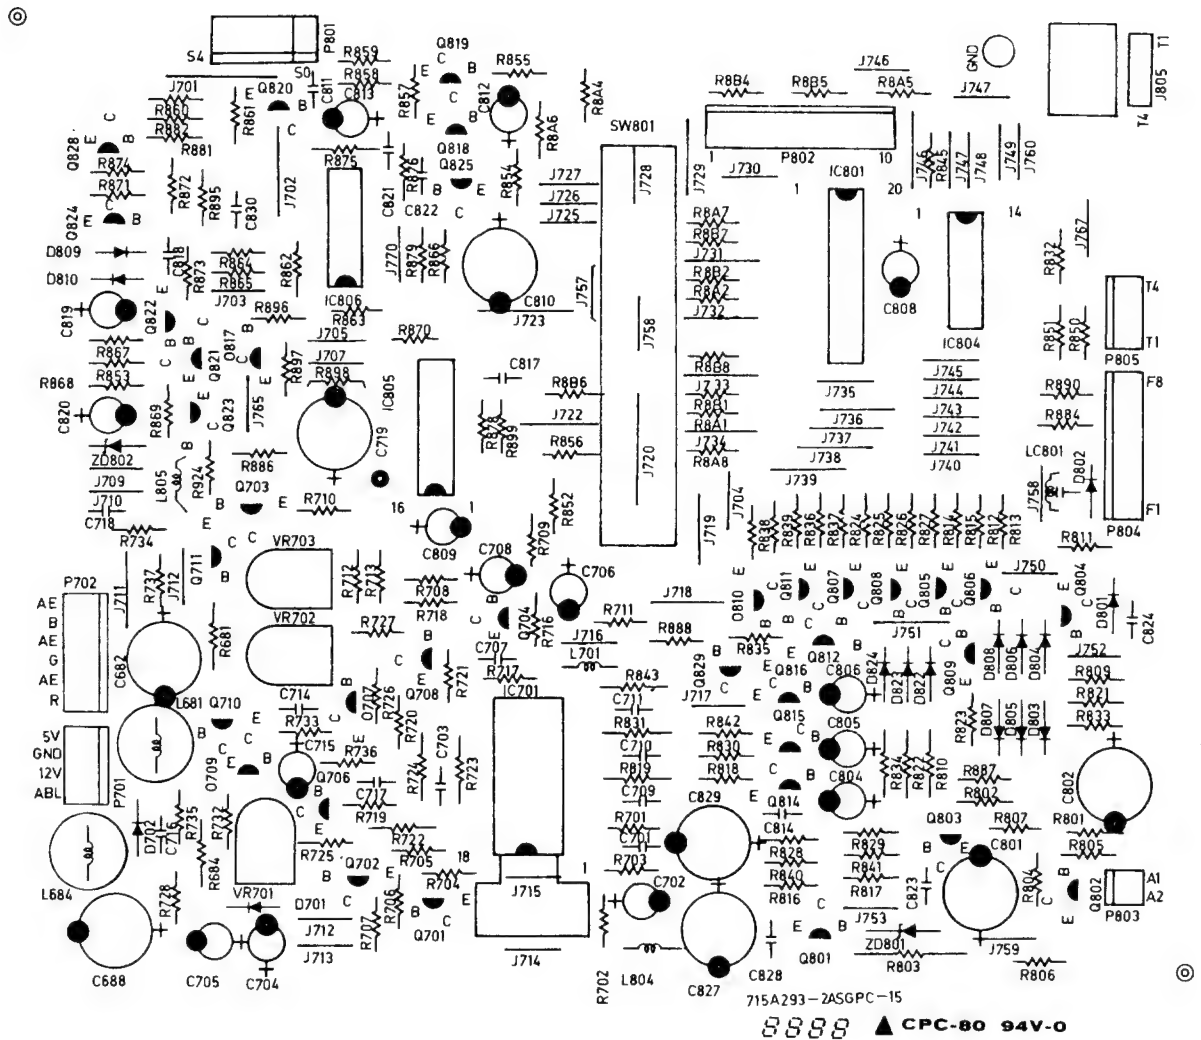

Turn this knob for the proper horizontal position of the display. Turn knob clockwise to reposition display to the right; turn it counterclockwise to reposition to the left.

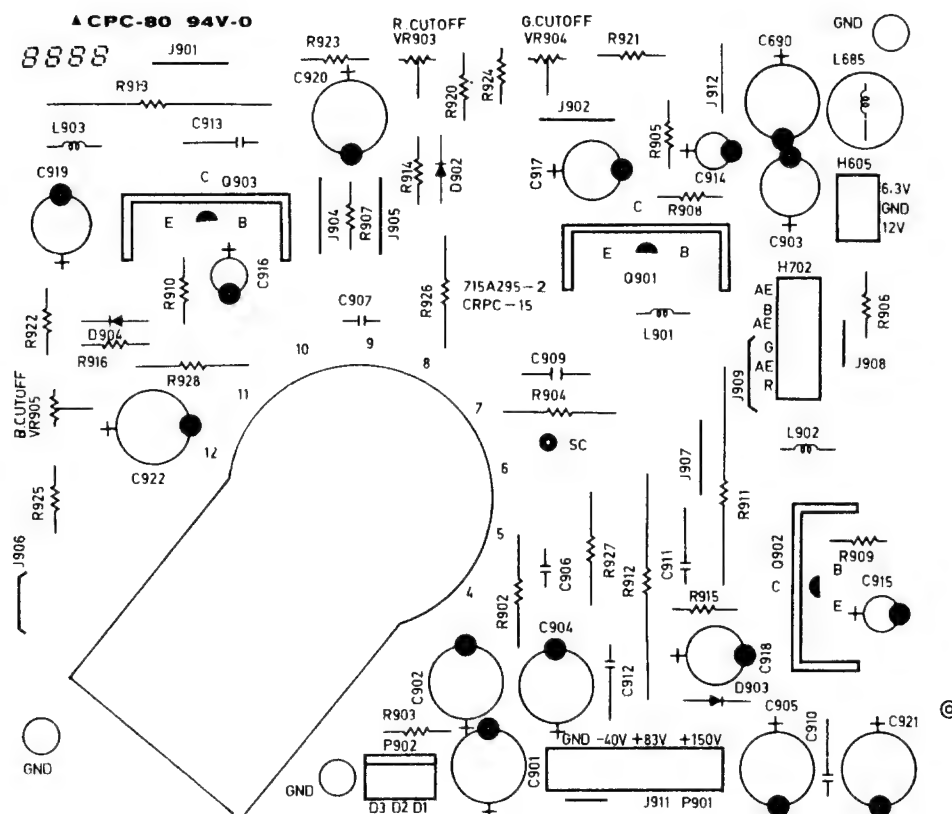

1. CONTROL BOARD (CNPC-15)
2. SIGNAL BOARD (SGPC-15)
3. MAIN BOARD (CMPC-15)
4. CRT BOARD (CRPC-15)

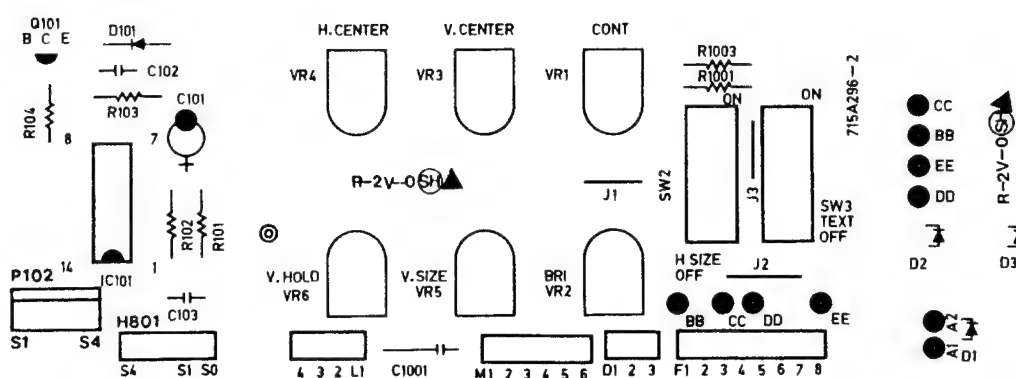

CMPC-15

SGPC-15

CRPC-15

CNPc-15

ALIGNMENT PROCEDURE

Adjust conditions and precautions

1) Power supply voltage

2) Warm up time

The display must be on for at least 20 minutes before starting alignments.

This is especially critical in color temperature and white balance adjustments.

3) Signals

Video: Analog 0.6 Vp-p, 75 Ω OHM, positive
 Analog sync. on green
 Video: 0.6 Vp-p
 Synchronizing 0.3 Vp-p

Synchronizing: TTL level negative/positive
 Separate/ composite

Scanning frequency: H. 15KHz – 37KHz
 V. 50Hz – 80Hz

Unless otherwise specified, adjust at signal 6 (22 KHz)

1. SW. REG.

- 1-1 +B1 (VR661) 83V Line
Adjust VR661 to be 83VDC
- 1-2 High Voltage control (VR641)
This control is permanently sealed at factory.
Do not attempt to readjust.

2. DEF Pre-Adjustment

- 2-1 +16v Adjustment
Adjust TP551-GND to +16V \pm 0.05V DC (VR551)
- 2-2 Receive signal 1 and adjust VR552 so that the voltage between TP552 and GND is 10 \pm 0.05VDC
- 2-3 H.V. Protector

The high Voltage protector control 1 (VR2002) and control 2 (VR2003) are permanently sealed at factory.

Do not attempt to readjust.

3. Main Adjustment

Unless otherwise specified, adjust the controls on the control board-CNPC-15 as show below:

- VR1 Contrast: Max (fully clockwise)
- VR2 Brightness: So that no background raster appears
- VR3 V position: Center
- VR4 H position: Center
- VR5 V size: Center
- VR6 V hold: Proper position
- SW2 H. size: OFF
- SW3 TEXT SW: OFF
- Focus control: Adjust for the optimum picture.

3-1 Adjustment of H. raster centering

Turn the brightness control fully clockwise so that background raster can be seen, adjust VR470 so that the background raster is in the center of the CRT screen. If the raster is off to one side, change the connector H503.

NOTE: Due to overscan; it is not possible to center the background raster if the horizontal frequency is between 15KHz and 20KHz, and the SW 2 H. size is ON.

3-2 1. H-hold

- (a) Short between TP501 and GND
- (b) Apply signal 3 (30KHz) and adjust H hold (1) VR502 so that the entire picture appears.
- (c) Apply signal 2 (20KHz) and adjust H hold(2) VR555 so that the entire picture appears.

2. H. position (adjust to the center of the raster)

- (a) Adjust sub H center 1 VR501 to center the picture when signal 3 (30.48KHz) is applied.
- (b) Adjust sub H center 3 VR554 to center the picture (1mm to the left) when signal 6(22K) is input for mutuality between actual EGA timing and test timing.
- (c) Adjust sub H center 2 VR553 to center the picture when signal 5 (15.75KHz) is applied.
- (d) Check that the picture is centered when the signal in a), b), and c) above are applied.

NOTE: Adjust in the order a) → b) → c)

3. Side pincushion

Adjust VR404 and VR406 for the optimum side pincushion distortion.

4. H width

Adjust H width L505 so that the size of the picture when signal 6 (22K) is applied is 240mm.

5. V position

Vertically center the picture when adjustment signal 6 (22KHz) is applied (VR3, V position)

6. V linearity

Adjust VR401 and VR402 so that vertical linearity is optimum when signal 6 (22KHz) is applied.

7. V-hold/V. size

- (a) Remove input signal
- (b) Turn VR6 V-HOLD control fully counterclockwise
- (c) Adjust VR452 so that the Vertical output frequency is 30ms
- (d) Turn VR5 V-SIZE control fully clockwise
- (e) Adjust VR403 and VR451 so that the vertical output waveform and voltage as shown below.

5. Focus Adjustment (Use signal 3)

Turn the contrast control fully clockwise and set the brightness control to a suitable position. Adjust the focus control to the optimum position.

6. Purity Adjustment

- 1) Be sure that the display is not being exposed to any external magnetic fields.
- 2) Ensure that the spacing between the purity, Convergence Magnet, (PCM), assembly and the CRT stem is $29 \text{ mm} \pm 1 \text{ mm}$. (See below diagram)
- 3) Produce a complete, red pattern on the display. Adjust the purity magnet rings on the PCM assembly to obtain a complete field of the color red. This is done by moving the two tabs in such a manner that they advance in an opposite direction but at the same time to obtain the same angle between the two tabs, which should be approximately 180° .
- 4) Check the complete blue and complete green patterns to observe their respective color purity. Make minor adjustments if needed.

7. Convergence Adjustment

- 1) Produce a magenta crosshatch on the display.
- 2) Adjust the focus for the best overall focus on the display. Also adjust the brightness to the desired condition.
- 3) Vertical red and blue lines are converged by varying the angle between the two tabs of the 4-pole magnets on the PCM assembly. (See above diagrams)
- 4) Horizontal red and blue lines are converged by varying the two tabs together, keeping the angle between them constant.
- 5) Produce a white crosshatch pattern on the display.
- 6) Vertical green and magenta lines are converged by varying the angle between the two tabs of the 6-pole magnets.
- 7) Horizontal green and magenta lines are converged by varying the two tabs together, keeping the angle between them constant.

4-2. Adjustment of gain control-Use signal 7

- (a) Receive a window pattern (Within a range for which ABL does not function ever with a maximum contrast, and preferably with a video range of $1/3$ to $(1/2H) \times (1/2V)$)
- (b) Turn the contrast control fully clockwise.
- (c) Adjust VR702 so that G OUT on the CRT Board CRPC-15 becomes 46Vp-p.
- (d) Adjust VR701 and VR703 so that the RED color and BLUE color are as Bright as GREEN

Do not include clamp pulse

5. Focus Adjustment (Use signal 3)

Turn the contrast control fully clockwise and set the brightness control to a suitable position. Adjust the focus control to the optimum position.

6. Purity Adjustment

- 1) Be sure that the display is not being exposed to any external magnetic fields.
- 2) Ensure that the spacing between the purity, Convergence Magnet, (PCM), assembly and the CRT stem is $29 \text{ mm} \pm 1 \text{ mm}$. (See below diagram)
- 3) Produce a complete, red pattern on the display. Adjust the purity magnet rings on the PCM assembly to obtain a complete field of the color red. This is done by moving the two tabs in such a manner that they advance in an opposite direction but at the same time to obtain the same angle between the two tabs, which should be approximately 180° .
- 4) Check the complete blue and complete green patterns to observe their respective color purity. Make minor adjustments if needed.

8. Switches and Controls Operation

Confirm the following SWs and controls operate correctly.

Switches

- 1) TTL/ANALOG SW
- 2) COLOR SW
- 3) TEXT SW
- 4) H. Width SW

Controls

- 1) Brightness
- 2) Contrast
- 3) V. size
- 4) V. position
- 5) V. Hold
- 6) H. position

9. Multi Scanning Operation

Confirm the CM-314 operate correctly with IBM PC W/CGA, EGA also VGA, PS2 or with signal 3,4,5, and 6.
